Bandung, Jawa Barat | yandiyani10@gmail.com | +6285155210030 | [linkedin.com/in/yandiyani/](https://www.linkedin.com/in/yandiyani/) | github.com/spicynoon | s.id/web_yandiyani

Informatics Engineering graduate (GPA 3.61) focused on frontend web development with React.js, Tailwind CSS, and JavaScript. Hands-on experience shipping responsive UI components, integrating REST services, and collaborating in agile cross-functional teams. Former Lead of Google Developer Student Club (368 members) with a working foundation in machine learning, bringing both technical breadth and proven team leadership. Comfortable translating Figma designs into functional interfaces and contributing actively in code reviews.

Education

Informatics Engineering — UIN Sunan Gunung Djati Bandung

Aug 2021 - Feb 2026

- Bachelor of Informatics Engineering (S.T.) — GPA: 3.61 / 4.00
- Thesis: Optimization of Adaptive Traffic Light Scheduling Using Proximal Policy Optimization (PPO) and Vehicular Ad-hoc Network (VANET)

Project Experience

Reform Syndicate Web

Dec 2025 - Feb 2026

Web Dev

- Maintained and enhanced features on an existing React + Tailwind CSS web platform (Vite build), ensuring responsive, cross-browser behavior.
- Built and maintained an admin dashboard for content management, enabling the team to create and update articles and other dynamic content.
- Integrated dashboard UI components with REST backend services to handle article data (create, update, display).
- Collaborated with designers and project managers in an agile workflow, and applied modular component practices to keep the codebase consistent.

Adaptive Traffic Light Optimization via PPO + VANET (Thesis)

Sept 2025 - Dec 2025

Supervised Undergraduate Thesis

- Designed and implemented a reinforcement learning system using Proximal Policy Optimization (PPO) for adaptive traffic signal control integrated with Vehicular Ad-hoc Network (VANET) communication.
- Utilized SUMO traffic simulator, TraCI interface, and OSMWebWizard for realistic urban traffic scenario generation, simulation, and performance evaluation.
- Demonstrated significant reduction in average vehicle waiting time and improved throughput compared to conventional fixed-timing signal control.
- Managed end-to-end research workflow: literature review, simulation design (SUMO/TraCI), experiment iteration, and academic reporting

VANET QoS Prediction System

Aug 2025

Machine Learning Engineer

- Developed a predictive model for network Quality of Service (QoS) in VANET using SUMO traffic simulation and CANVAS (IEEE 802.11bd) stack output data.
- Applied Random Forest, Support Vector Machine (RBF kernel), and Artificial Neural Networks to classify QoS conditions (good, moderate, poor) based on PHY and MAC layer parameters.
- Implemented automated preprocessing, anti-leakage feature engineering, probabilistic evaluation, and cross-scenario generalization analysis to ensure model robustness.

EarlyNourish: Child Nutrition Prediction System

Apr 2025 - Jul 2025

Machine Learning Engineer - Capstone Project Coding Camp 2025

- Led a cross-functional team in delivering an end-to-end ML system for predicting stunting risk in children.
- Coordinated sprint planning, task distribution, and progress tracking across team members using agile methodology.
- Managed full project lifecycle: from requirement gathering, data preprocessing, model development, to deployment.
- Ensured on-time delivery of all milestones within the program timeline.

Equilibrium: Gender Discussion Platform

Apr 2025 - Jul 2025

Full Stack - Final project for the Distributed Systems course.

- Built a full-stack web application providing a safe space for gender-equality discussions.
- Designed a microservices architecture with Docker deployed on Google Cloud Platform, applying distributed systems concepts from the course.
- Developed the frontend with React.js and deployed it via Vercel.

Work Experience

Web Developer — Reform Syndicate

Dec 2025 - Feb 2026

A digital-first research and media entity specializing in public policy advocacy.

- Developed web applications and integrated backend services, gaining firsthand SDLC experience that strengthens technical documentation accuracy and depth.
- Collaborated with designers and project managers using agile workflows to deliver features on schedule.
- Collaborated with cross-functional teams including designers and project managers to deliver features on schedule.

Technical Writer — Reform Syndicate

Oct 2025 - Nov 2025

- Authored technical documentation, product guides, and knowledge base articles to support product development and cross-team knowledge sharing.

IT Support — PT. Persib Bandung Bermartabat

Apr 2025 - Oct 2025

Professional football club — IT operations and infrastructure

- Provided technical support for internal IT systems; documented technical procedures, troubleshooting guides, and operational SOPs for the IT department.
- Supported system configuration, software deployment, and digital infrastructure during official matches and club operations.

Freelance Technical Writer — Financial and Banking Services Industry

Jan 2025 - Mar 2025

Project-based technical documentation for banking application development

- Authored System Integration Testing (SIT) documents, Functional Specification Document (FSD), and Software Requirement Documents (SRD) for banking application development, ensuring alignment with SDLC standards.
- Collaborated with development and QA teams to translate technical specifications into structured, traceable documentation supporting UAT and go-live processes.

Organization and Community Experience

Lead — Google Developer Student Club, UIN SGD Bandung

Aug 2023 – Sep 2024

- Led 368 active members through Study Jam and Tech Talk Weekly events; directed R&D division to develop comprehensive learning curriculum.
- Mentored a delegation for the Google Solution Challenge, achieving top 100 global placement in 2024.

Secretary, Education & Training Div. — Bakornas LTMI PB HMI

Dec 2025 – Present

- Coordinating national-level educational programs, training curricula, and capacity-building initiatives in technology at the National Coordinating Board.

Founder — Altnooire Community

Sept 2025 - Present

- Established a community focused on science, technology, and collaborative learning; organized educational discussions and knowledge-sharing sessions.

Skills

Documentation: SIT, FSD, BRD, User Manual, API Documentation, SOP, UAT Scenarios, System Workflow, Release Notes

Project Management: JIRA, Smartsheet, Appsheet, Trello, Google Workspace, Notion

Writing & Tools: Microsoft Office Suite, Google Docs, Markdown, Confluence, FigJam, Notion, Figma, Lucidchart

Technical: SDLC, Agile/Scrum, REST API, SQL, Python, JavaScript, React.js, Flutter, Git/GitHub, Docker

Soft Skills: Technical Communication, Cross-functional Collaboration, Attention to Detail, Analytical Thinking, Problem-Solving

ML & AI: Reinforcement Learning (PPO), Random Forest, SVM, ANN, NLP, Sentiment Analysis, TensorFlow, Keras, Scikit-learn

Certifications

Microsoft: Microsoft Office Specialist (Certiport)

Dicoding Indonesia: Machine Learning Terapan, Fundamental Deep Learning, Back-End Pemula (JavaScript), Pemrograman JavaScript, Dasar Cloud & Gen AI (AWS Cloud Practitioner Essentials), Fundamental Pemrosesan Data, Machine Learning untuk Pemula, Analisis Data dengan Python, Memulai Pemrograman dengan Python, Dasar SQL, Dasar Visualisasi Data, Dasar AI, Memulai Dasar Pemrograman, Dasar Git dengan GitHub, Programming Logic 101, SOLID, Dasar UX Design, Dasar Manajemen Proyek, Pemrograman Dart, Flutter Fundamental, Flutter Intermediate, ML untuk Android, Financial Literacy 101

Oracle Academy: Database Design, Database Programming with SQL

Cisco Academy: CCNAv7: Introduction to Networks
